

Primary and Secondary Ports

E-UB, E-RB, E-TBT, E-ST

When uploading software into the display of any of the E Series Bikes, Total Body Trainers or Steppers, it is important to follow a couple of key guideline.

Upload to the Correct Port

Be sure to upload the proper software into the proper port. Example: Primary software must go in the primary port and secondary software into the secondary port.

Warning: If done incorrectly, the display will no longer function and can not be repaired.

Load Software in Order

The software must be loaded primary first and then secondary. If secondary is loaded first, the display may operate erratically until the primary is loaded.
